Coding & Solution

Date	15 March 2026
Team ID	SWTID-2026-4593
Project Name	Machine Learning–Based Credit Card Approval Prediction System
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/Luca090/CREDITCARDAPPROVALAI
Programming Language(s)	Python, JavaScript, HTML5, CSS3, SQL
Framework(s) Used	Flask, Bootstrap 5
Key Features Implemented	User Registration & Login, Applicant Data Entry, Machine Learning Prediction, Approval / Rejection Result, Prediction History, Dashboard
Pending / Incomplete Features	Email / SMS Notifications, Admin Analytics Dashboard, Multi-language Support
Setup / Run Instructions	1. Clone the repository from GitHub. 2. Create a virtual environment and activate it. 3. Install required dependencies using requirements.txt. 4. Configure MySQL database in config.py. 5. Run the Flask application using app.py. 6. Access the application at http://127.0.0.1:5000/

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

- The project follows modular architecture with clear separation of concerns.
- Functions and modules are reusable and maintainable.
- Comments and docstrings are added in all critical sections.
- Exception handling is implemented for database and user input operations.
- The application is tested locally and deployed successfully.
- Source code is maintained in a GitHub repository with regular commits.
