Customer Journey Map

Introduction

The Customer Journey Map illustrates the complete experience of a credit card applicant while interacting with the Machine Learning–Based Credit Card Approval Prediction System. It identifies user interactions, expectations, emotions, responsibilities, and improvement opportunities throughout the credit card approval process. This analysis helps design a user-centric, efficient, secure, and intelligent application.

Customer	Credit Card Applicant
Goal	Obtain a fast, secure, transparent, and accurate prediction regarding credit card approval eligibility.

Journey Stages	Stage 1 Awareness	Stage 2 Eligibility Check	Stage 3 Application Submission	Stage 4 Machine Learning Evaluation	Stage 5 Prediction Result	Stage 6 Post-Prediction
 Actions	Learns about online credit card services.	Reviews eligibility requirements.	Enters personal and financial information.	Submits the application for automated analysis.	Views approval or rejection prediction.	Applies for the credit card or improves eligibility.
 Touchpoints	Official Website	Eligibility Information Page	Application Form	Machine Learning Prediction Engine	Prediction Dashboard	Customer Support and Banking Services
 Customer Thoughts	Which credit card is suitable?	Am I eligible?	Did I enter correct information?	Will the prediction be accurate?	Why was I approved or rejected?	How can I improve future eligibility?
 Customer Feelings	Interested 	Curious 	Hopeful 	Anxious 	Satisfied or Disappointed  	Motivated to Improve 
 Process Ownership	Bank Marketing Team	Eligibility Verification Module	Applicant	Machine Learning Prediction System	Prediction Engine	Bank Administrator
 Opportunities	Increase customer awareness.	Provide simple eligibility guidance.	Improve application usability.	Deliver accurate Machine Learning predictions.	Provide transparent prediction explanations.	Offer personalized recommendations for improving eligibility.

Journey Summary

The Machine Learning–Based Credit Card Approval Prediction System simplifies the complete customer journey by reducing manual effort, improving prediction speed, enhancing transparency, and providing intelligent decision support. The proposed solution enables applicants to understand their eligibility quickly while assisting financial institutions with efficient and consistent credit approval decisions.

Conclusion

The Customer Journey Map demonstrates every interaction between the applicant and the Machine Learning–Based Credit Card Approval Prediction System from initial awareness to the final prediction outcome. Understanding customer behaviour, expectations, emotions, and pain points enables the development of a secure, user-friendly, intelligent, and efficient credit card approval platform.
